

Working Title of the Paper

First Author^a, Second Author^b, and Third Author^a

^a*First Institute, First University, Country*

^b*Second Institute, Second University, Country*

Abstract

One paragraph summarising the problem, what was done about it, and what came out
[deleted: An earlier phrasing of the opening sentence]. State the gap in the first two
sentences, the approach in the middle, and the headline result at the end¹. Keep it to
5 the word limit of the target journal.

Synopsis

Two sentences on why this matters beyond the immediate field, if the target journal asks
for a synopsis or significance statement.

Keywords

10 first keyword, second keyword, third keyword, fourth keyword

Figure 1: Graphical Abstract.

1 Introduction

Open with the wider context and narrow towards the specific gap this paper closes^{1,2}.
One paragraph per step of that narrowing usually suffices.

State what remains unresolved, and why the existing approaches cannot resolve it³.

15 Be concrete about the limitation rather than listing papers. A sentence added in response to a reviewer who asked for the gap to be stated more sharply.

Close the introduction by saying what this work does, in the order the rest of the paper presents it.

2 Methods

20 Describe the approach so that someone else could repeat it. Introduce notation once and use it consistently. Let $\mathbf{x}$ denote the vector of decision variables and $\mathbf{A}$ the coefficient matrix, so that

$$\mathbf{A} \mathbf{x} = \mathbf{b}, \tag{1}$$

where $\mathbf{b}$ is the demand vector. Refer back to Eq. 1 rather than repeating it.

2.1 First Component

25 Split the methods into the components a reader needs in order. Each subsection should answer one question. [deleted: A sentence removed because a reviewer found it redundant.]

2.2 Second Component

Where a figure explains the structure better than prose does, use one.

30 2.3 Implementation

Name the software, the versions, and where the code lives. Point at the documentation rather than reproducing it.

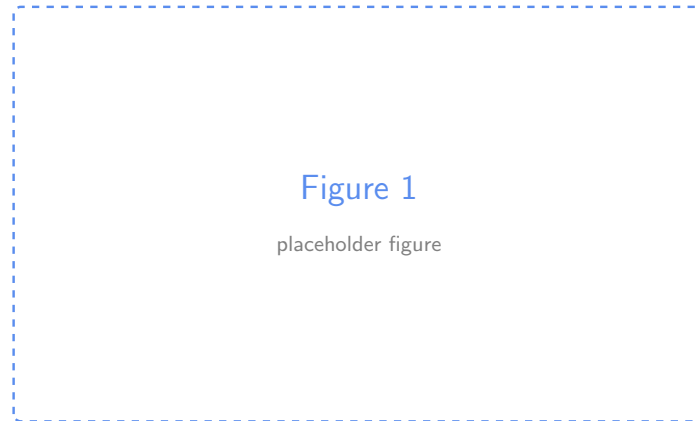

Figure 2: Caption stating what the figure shows and what to take from it.

3 Results

Set up the case or dataset first, then report what it produced. Quantify by stating the
35 number, its unit, and what it should be compared against. [An added sentence reporting
the quantity a reviewer asked for.](#)

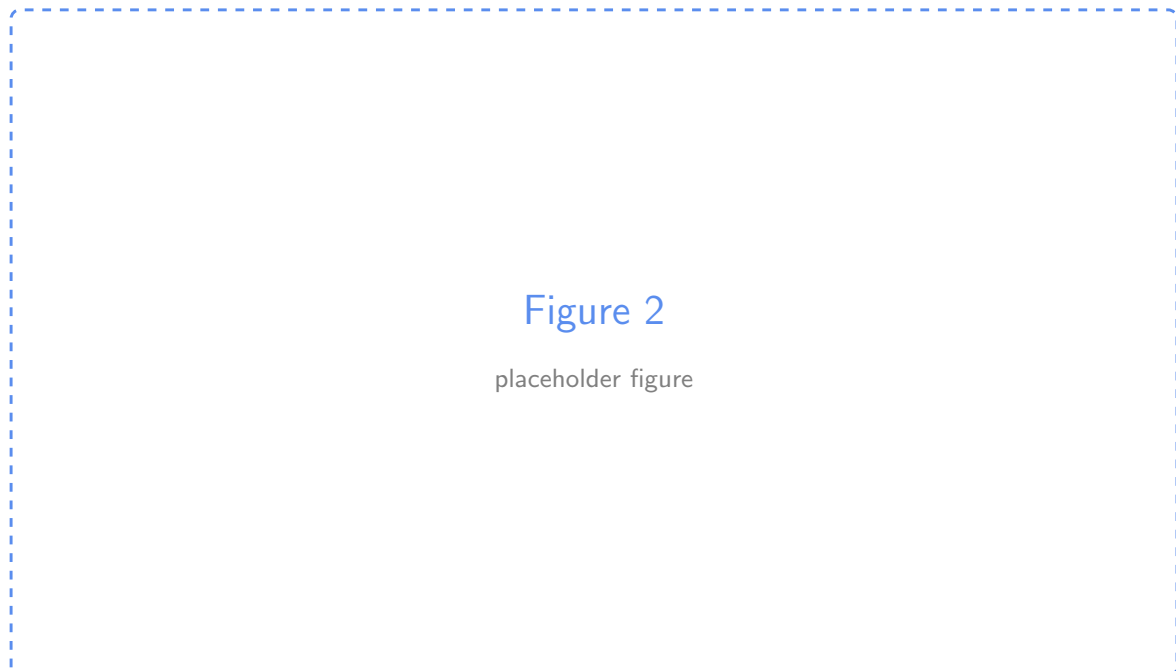

Figure 3: Caption stating what the figure shows and what to take from it.

Walk through Fig. 3 in the order a reader meets it, and say what each panel establishes.

4 Discussion

Say what the results mean for the gap identified in the introduction, without restating
40 them.

4.1 Limitations

State the assumptions that would change the conclusions if violated, and how far they
can be relaxed.

4.2 Outlook

45 Name the concrete next steps this work makes possible.
